Evidence to improve maternal and newborn health

ideas.lshtm.ac.uk
IDEAS: why & what?

- Maternal survival improving worldwide
  - Deaths concentrated in sub-Saharan African and South Asia
- 40% of all under-five deaths in the neonatal period -- first 28 days of life
- North-Eastern Nigeria, Uttar Pradesh and Ethiopia:
  - 6% of the world’s population
  - 10% of global births
  - 16% of global maternal and newborn deaths
- IDEAS: Informed DEcisions for Actions in maternal & newborn health
- Evaluation of BMGF MNH investments across three countries.
- Delivered by London School of Hygiene & Tropical Medicine, with local partners HealthHub, JaRCo, and Sambodhi
Our objectives

1. To build capacity for measurement, learning & evaluation.
2. To measure efforts to enhance interactions between families & frontline workers and increase the coverage of critical interventions.
3. To explore scale-up of maternal and newborn health innovations.
4. To investigate the impact on survival of maternal and newborn health innovations implemented at scale.
5. To promote best practice for policy.
Research questions

1. To what degree do maternal & newborn health innovations enhance interactions between families and frontline workers, and intervention coverage in key districts? How?

2. What maternal and newborn health innovations have been successfully scaled-up to other areas of Ethiopia, North-Eastern Nigeria and Uttar Pradesh? What helps and what hinders scale-up?

3. Where maternal and newborn health innovations have been scaled-up, has intervention coverage & newborn survival improved as a result?
Theory of change

**INNOVATION**
Maternal & newborn healthcare is delivered in a new way

**ENHANCED INTERACTIONS**
between families and frontline workers

**INCREASED COVERAGE**
of critical interventions (practices that save lives)

**HEALTH OUTCOME**
Improved maternal & newborn survival

Innovation introduced in grantee key districts

Innovation scaled-up
Innovations

• Bill & Melinda Gates foundation maternal & newborn health implementation grantees

• Ethiopia
  – JSI (L10K); Save the Children (SNL); Emory University (MANHEP)
  – Example: Community-based data for decision making

• North-East Nigeria
  – Society for Family Health
  – Example: Call centre for front-line workers & families

• Uttar Pradesh, India
  – Public Health Foundation of India; Intrahealth (Manthan);
    Harvard SPH (Better Birth); PATH (Sure Start)
  – Example: Safe childbirth checklist
Theory of change

INNOVATION
Maternal & newborn healthcare is delivered in a new way

ENHANCED INTERACTIONS
between families and frontline workers

INCREASED COVERAGE
of critical interventions (practices that save lives)

HEALTH OUTCOME
Improved maternal & newborn survival

SCALE UP
adoption of innovations beyond initial areas

Innovation introduced in grantee key districts

Innovation scaled-up
Enhanced interactions between families and front-line workers: more, better, efficient, equitable

**More**
- Mean number of antenatal care interactions
- % of women having at least 4 antenatal care interactions
- % of births attended by a skilled provider
- % of newborns with danger signs who sought care outside the home

**Better**
- % of interactions where appropriate activities carried out
- % of front-line workers with knowledge of appropriate care
- % of women with knowledge of danger signs
- % of primary care facilities where essential commodities are available

**Efficient**
- Reduced costs, increasing quantity or quality of output

**Equitable**
- Reducing inequities between families in number & quality of interactions; coverage
- Socio-economic status of households; ethnicity; distance
Theory of change

**INNOVATION**
Maternal & newborn healthcare is delivered in a new way

**ENHANCED INTERACTIONS**
between families and frontline workers

**INCREASED COVERAGE**
of critical interventions (practices that save lives)

**HEALTH OUTCOME**
Improved maternal & newborn survival

Innovation introduced in grantee key districts

Innovation scaled-up
## Coverage of critical interventions in MNH

Research questions

1. To what degree do maternal & newborn health innovations enhance interactions between families and frontline workers, and intervention coverage in key districts? How?

2. What maternal and newborn health innovations have been successfully scaled-up to other areas of Ethiopia, North-Eastern Nigeria and Uttar Pradesh? What helps and what hinders scale-up?

3. Where maternal and newborn health innovations have been scaled-up, has intervention coverage & newborn survival improved as a result?
Baseline study in Nigeria
June 2012

• Before-after comparison of interactions between families and front-line workers, and of intervention coverage, 2012-2014
• Household survey
  – All resident women aged 13-49; Women aged 13-49 with a live birth in last 24 months
• Facility survey
  – Sub- and primary level facilities for readiness/routine data extraction
  – Referral level facility for routine data extraction
• Front line health worker survey
  – Volunteers/community workers; Midwives/nurses at primary level facilities
• Sampling & methods
  – 40 clusters (enumeration areas) from Gombe State (PPS)
  – Visit all households, interviewed all women aged 13-49, extra module for women with a recent birth
  – Identify and interview the frontline workers assigned to each cluster
  – Identify and survey the primary care facility
  – Identify and survey the nearest referral facility
Gombe State, Nigeria
Results from primary health care facilities
## Basic infrastructure & staff

Conclusions

• IDEAS aims to improve the health and survival of mothers and babies through generating evidence to inform policy and practice
  – Ethiopia, North East Nigeria and Uttar Pradesh, India
• Early baseline data, primary health facilities in North-East Nigeria
  – Fewer than half had qualified staff in place
  – None had basic equipment and drugs to provide essential antenatal, intra-partum, post-partum or post-natal care
  – Practices known to save maternal and newborn lives are not widely observed
  – Huge scope to improve health indicators
