

Table 1 : Trends of age-standardised (world standard) incidence, number of cases and median age at diagnosis for head and neck cancers according to potential human papilloma virus association and sex, 1980-2012, France

	Years					Annual percentage change (%)	
	1980	1990	2000	2005	2012	1980-2012	2005-2012
<b>HPV-related HNC</b>							
Age-standardised incidence							
Men	11.9	10.6	9	7.9	6.2	-2	-3.5
Women	0.6	0.8	1.2	1.4	1.6	3	1.9
Number of cases							
Men	3663	3622	3545	3435	3042		
Women	229	321	506	646	834		
Age (median)							
Men	56	58	58	58	61		
Women	60	60	57	57	60		
<b>HPV-unrelated HNC</b>							
Age-standardised incidence							
Men	37.6	34.0	26.0	21.1	14.3	-3	-5.4
Women	1.9	2.4	2.9	3.0	2.9	1.4	-0.4
Number of cases							
Men	11786	11873	10551	9436	7277		
Women	773	1113	1472	1661	1819		
Age (median)							
Men	58	60	61	60	62		
Women	65	65	65	63	64		

HPV : Human papilloma virus ; HNC : Head and neck cancer
