

## Supplementary material

### Additional table 2: Comparison of mean infant-BCG uptake by primary place of immunisation, stratified by current vaccination policy

<b>Current infant BCG policy / Primary place of infant BCG vaccination</b>	<b>Uadjusted beta coefficient (95%CI)</b>	<b>p-value</b>	<b>Adjusted beta coefficient** (95%CI)</b>	<b>p-value</b>
<b>Universal</b>				
<b>Community settings (n=10)</b>	-		-	
<b>Postnatal ward (n=6)</b>	1.2 (-17.7 to 20.1)	0.90	14.4 (-12.4 to 41.1)	0.26
<b>Selective</b>				
<b>Community settings (n=38)</b>	-		-	
<b>Postnatal ward (n=48)</b>	19.5 (11.6 to 27.4)	<0.0001	18.3 (9.3 to 27.3)	<0.0005

*\*\*Adjusted for all other variables in the main model: past infant BCG policy, PCT-level index of multiple deprivation, standardised 3-year average TB incidence, and ethnic minority population in the birth cohort.*
