Table 4: Results of fitting multiple logistic regression models for factors associated with moderate to high risk of suicidality (MHS)

Factor	Level	Odds Ratio (95% Confidence Interval)	Likelihood Ratio P-value
Study Site	Entebbe Masaka	1 (Reference Level) 0.53 (0.17 ; 1.66)	0.28
SES index	Per unit increase	0.86 (0.74 ; 0.996)	0.040
Employment status	Any employed Unemployed or retired	1 (Reference level) 4.02 (1.53 ; 10.58)	0.007
200 / (Resilience score) *	Per unit increase	1.75 (1.23 ; 2.49)	0.003
Stigma Score	Per one SD increase	1.67 (1.01 ; 2.76)	0.045
MDD excluding suicidality items	No Yes	1 (Reference Level) 7.55 (2.73 ; 20.87)	0.0001

Note:

* The odds of moderate to high risk of suicidality decrease with increasing resilience, but with a diminishing effect i.e. the effect is most marked for a resilience score below 40.
