

Table 1. Data available from included studies

<b>Data captured</b>	<b>Study A<sup>19</sup></b>	<b>Study B<sup>9</sup></b>	<b>Study C<sup>11</sup></b>
How was moderate-to-severe eczema defined?	SASSAD of $\geq 10$	$\geq 3$ flare ups in previous six months	Nottingham Eczema Severity Scale (NESS) of $\geq 9$
Definition of WCW used $\S$	WCW: $\leq$ two days where stepping up of treatment was required and $\leq$ two days with a bother score $>4$	WCW: $\leq$ two days where stepping up of treatment was required and $\leq$ two days with a bother score $>4$	WCW: $\leq$ two days when topical corticosteroids used and global bother score $\leq 4$ for the week
Bother score (0-10) “How much bother did your (your child's) eczema cause today?”	Daily in paper diaries	Daily in electronic diaries	Bother over the last week assessed at baseline, weeks 8, 16 and 24
Scratch score (0-10) “How much did you (your child) scratch today?”	Daily	Daily	-
Treatment “stepped up” (Individually defined at the start of the study) (Yes/No)	Daily	Daily	-
Topical corticosteroid use (Yes/No)	Daily (Yes/No)	-	Weekly (number of days in the last week)
Topical calcineurin inhibitor use (Yes/No)	Daily	-	Weekly (number of days in the last week)
POEM scores <sup>13</sup> (range 0-28)*	Baseline, weeks 4, 12 and 16	Baseline, weeks 4, 8, 12, 16, 20 and 24	Weekly
TIS scores <sup>15</sup> (range 0-9)*	weeks 12 and 16	Baseline, weeks 4, 8, 12, 16, 20 and 24	Baseline, weeks 8, 16 and 24
SASSAD scores <sup>14</sup> (range 0-108)*	At weeks 12 and 16	-	-
EASI scores <sup>20</sup> (range 0-72)*	-	-	Baseline, weeks 8, 16 and 24

\* Higher scores denote more severe disease

$\S$  Higher WCW scores represents better disease control
