The authors regret that the reported non-synonymous mutation L550V in the \textit{PfcPbers} gene is a synonymous mutation. We would like to correct this information in the manuscript.

In the Results section, second paragraph, it should read: “The L550V mutation was not identified in the set of global field isolates considered here. At this position we detected a synonymous mutation.” In the Discussion, second paragraph, this sentence can be omitted “From these observations, we speculate that for new antimalarial compounds acting on the \textit{PfcPbers} gene, acquired resistance may occur more rapidly …”. L550V should be omitted from Tables 1 and 2 and Suppl. Table 1.

The authors would like to apologies for any inconvenience caused.
