Table 2: Linear effect of the number of HIVST kits distributed through ATLAS on access to HIV testing, conventional tests, diagnoses and ART initiations in the health districts monitored by PEPFAR in Côte d'Ivoire (Q3 2019 to Q1 2021)

	All districts			ATLAS districts		
Outcome	Coef.	95% CI[1]	p-value	Coef.	95% CI[1]	p-value
Conventional testing	-195	-427 to 38	0·10	112	-527 to 750	0·73
HIV diagnoses	8	0 to 15	0·04	14	-10 to 38	0·25
ART initiations	-2	-8 to 5	0·66	5	-14 to 25	0·57

[1]CI = Confidence Interval. Coef.= coefficient. For the three outcomes, only the regression coefficients of the number of HIVST kits distributed through ATLAS are presented. Coefficients represent the unit change (e.g., conventional tests, diagnoses, ART initiations) per 1,000 HIVST test kits distributed through ATLAS. For the full regression table, see the Supplementary Material (Table A1 through A3).
